
How to configure static IP address for VAP11N

1. Connect VAP11N to the computer:.

Connect the Ethernet cable of VAP11N to the Ethernet port of computer, the USB cable of VAP11N to USB port to get power.

Tips: (1) Please disable Wireless network and enable the Local connection of computer.

(2) Set computer IP address to “Obtain an IP address automatically”

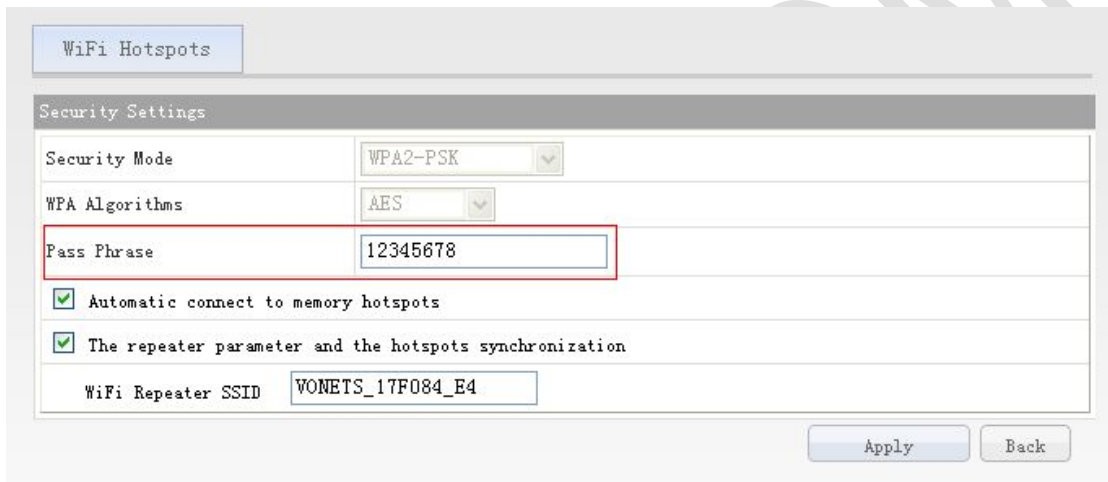

2. Configure VAP11N to connect to wifi router

(1) Open the IE browser, enter <http://vonets.cfg> enter the VAP11N configuration webpage

Tips: User Name: admin, Password: admin

(2) Choose the SSID of the wifi router then connect.

Tips: Please make sure the wifi password of wifi router is correct, if any doubts, please have a look at the user manual of VAP11N.

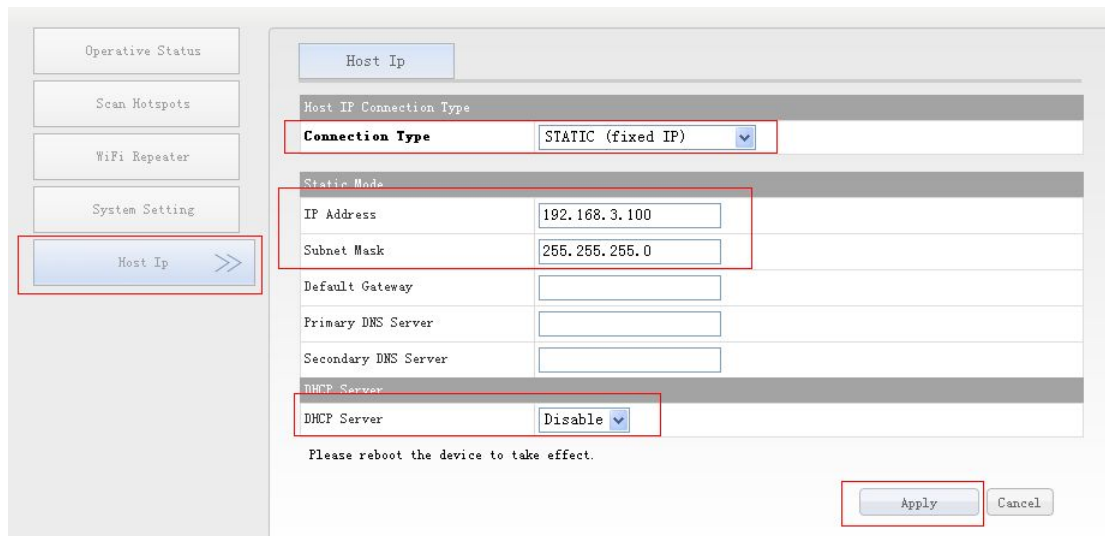

The screenshot shows the 'WiFi Hotspots' configuration page. Under the 'Security Settings' section, the following fields are visible:

- Security Mode: WPA2-PSK
- WPA Algorithms: AES
- Pass Phrase: 12345678 (highlighted with a red box)
- Automatic connect to memory hotspots
- The repeater parameter and the hotspots synchronization
- WiFi Repeater SSID: VONETS_17F084_E4

Buttons for 'Apply' and 'Back' are located at the bottom right of the form.

3. Revise the IP address of VAP11N manually

Enter the configuration webpage to revise the IP address of VAP11N manually, and **close the DHCP service**. Please make sure the IP address of VAP11N can't be the same segment as your wifi router. For example, the IP address of wifi router: 192.168.2.X, the subnet mask: 255.255.255.0, then the VAP11N can be revised to: 192.168.3.X, the subnet mask: 255.255.255.0. Please see below:

The screenshot shows a web-based configuration interface for a device. On the left is a sidebar menu with buttons for 'Operative Status', 'Scan Hotspots', 'WiFi Repeater', 'System Setting', and 'Host Ip' (which is highlighted with a red box and a right-pointing arrow). The main area is titled 'Host Ip' and contains the following settings:

- Host IP Connection Type:** A dropdown menu set to 'STATIC (fixed IP)' (highlighted with a red box).
- Static Mode:** A section containing:
 - IP Address:** A text input field containing '192.168.3.100' (highlighted with a red box).
 - Subnet Mask:** A text input field containing '255.255.255.0' (highlighted with a red box).
 - Default Gateway:** An empty text input field.
 - Primary DNS Server:** An empty text input field.
 - Secondary DNS Server:** An empty text input field.
- DHCP Server:** A dropdown menu set to 'Disable' (highlighted with a red box).

Below the settings, there is a note: 'Please reboot the device to take effect.' At the bottom right, there are two buttons: 'Apply' (highlighted with a red box) and 'Cancel'.

Tips: Users can configure VAP11N to connect to wifi hot spot, then revise VAP11N IP manually, and close the DHCP service, finally turn off and reboot VAP11N.
